The VAX-11/780, introduced on October 25, 1977, was the first of a range of popular and widely used computers. The VAX architecture's primary features included virtual addressing (for example demand paged). The architecture was documented in various manuals such as the "VAX MACRO and Instruction Set Reference Manual" and the "Procedures Reference Manual: Part II, Version VAX MACRO, VAX PL/I, VAXport, VAX–11, VAX–11 RSX, VAX–11/750, Compound Document Architecture."
